

LADDER TEST (AUDETTE)

One aim point, one shot per charge, NO scope adjustments. Read vertical stringing for a node.

300 YARDS MINIMUM — this method needs vertical spread and fails at 100

PRINT AT 100% / ACTUAL SIZE — turn OFF "Fit to Page" and "Shrink oversized pages"

Shot ID is the hard part: plot live through a spotting scope, use a target cam, or colour bullet tips with marker ahead of the ogive so the ink transfers a coloured ring to the paper.

Ladder and OCW are different tests. Ladder: one target, single shots, 300 yd+. OCW: separate targets, 3 shots each, 100 yd.
